Professional Summary

Devoted full-stack/complete-cycle software developer with years of experience working in professional setups. Known for delivering quality products on time. Possessing a wide variety of skills that allow to develop any type of software, be it, mobile, web, desktop or any other. Consistently relied upon for bringing innovation, creativity and a touch of originality to whatever is to be built. Ready to cope with any environment, and conditions that may somehow affect the successful development of any given project. Passionate about languages, currently, six of them are being learned, therefore productivity will not be affected if cross-cultural relationships are a must.

Education

- Most education has been acquired as part of a computer-science degree and on own efforts. Professional skills have been polished working on real-work projects, study of languages, translation, and devotion to knowledge.

Skills

- Languages: C#, Delphi, C, C++, Java, Python, Php, Javascript, HTML, CSS, SQL, Groovy and any other necessary.
- Frameworks: Android, Grails, Angular, JBoss Seam, Hibernate, and any other necessary.
- IDEs: Visual Studio, IntelliJ range of products, Eclipse, Netbeans, etc.
- Databases: PostgreSQL, Mysql, Microsoft's Database.
- Creation of installers using InnoSetup.
- Web-scraping expertise.
- Pre-packaged Server Installation: Operating Systems, including, but not limited to, Unix-based ones such as Linux and Redhat, and Windows. And others such as BigBlueButton, and Mattermost.
- Reporting: JasperReports and related tools.
- Ready to use any package repositories, including Composer and NPM.

- Native Spanish Speaker and Near-native command of English. Skills include mastery of etymology, colloquialisms, business and scientific vocabulary, among other terminologies.

Past Projects

- System for Primary Health Care (intended for any country's health system).
- System for Management of Clinical Tests Data (very important step for the elaboration/evaluation of drugs).
- System for Classified Ads.
- System for auctioning (Improvements to front-end and back-end).
- System for controlling algorithms execution (run, pause, resume).
- Desktop application to manage rooms on different rentals sites.
- Desktop application to manage translation of texts and their delivery to customers.
- Rasaga Trivia: a desktop application to train speakers/sellers more effectively. It is a game to learn to give the most suitable answer at any given situation. It has a admin panel to manage the content that is used to play.
- Scoreboard: a desktop application that emulates the traditional board for publicly displaying the score in a game or match of baseball, basketball or any other.
- System for Event Management: currently organizations need a way to react fast to what affects them. Therefore, having a system that allows its members to contribute to what was previously stated is paramount. Such a system has a panel for managing users, roles, permissions, events and their categories. Reports can be exported to pdf format.
- System to Access the internet using emails (including apps for desktop, web, and android).
- Creation of CV Templates using Microsoft Word.
- Android App for displaying any folder's content (its hierarchy), seamlessly, that is, without having actual access to the device containing the folder.

Hobbies and Interests

- Voracious reader and active user on language-learning apps such as Duolingo, LingoDeer and Rosetta Stone. Involved in language groups and communities as well as QA platforms as is the case of Quora. Enjoy cooking and practicing bodybuilding. Currently interested on, and learning, Italian, German, Russian, French and Portuguese.

Languages:

- Spanish: expert level.
- English: expert level.
- German: starter level.
- Italian: starter level.
- French: starter level.
